

In the Claims:

Please cancel claim 30 without prejudice and amend claims 24 and 34 as follows:

Claims 1 to 23.(canceled)

24.(currently amended) An air nozzle attachment (8) for a hair dryer, said hair dryer (2) having a fan and a heater for generating a central hot-air stream (5) and a concentric cold-air stream (6) concentric to the central hot-air stream at a blower opening (7), wherein the air nozzle attachment (8) is connectable to the blower opening (7) by means of a snap-on connection (18) and produces a hot-air stream (9) and a cold-air stream (10) from the central hot-air stream (5) and the concentric cold-air stream (6) of the hair dryer (2), wherein said hot-air stream (9) and said cold-air stream (10) produced by the air nozzle attachment (8) are arranged side-by-side, wherein the air nozzle attachment (8) comprises a hot-air nozzle (13) and a cold-air nozzle (14) located side-by-side, wherein the air nozzle attachment (8), on an end connectable with the blower opening (7), is provided with a central conduit entrance (11) and a coaxial conduit entrance (12) coaxial to the central conduit entrance (11), and wherein the central conduit entrance (11) opens into the hot-air nozzle (13) and the coaxial conduit entrance (12) opens into the cold-air nozzle (14), and wherein the air nozzle attachment (8) is detachable from the blower opening (7).

25.(previously presented) The air nozzle attachment as defined in claim 24, wherein the hot-air nozzle (13) and the cold-air nozzle (14) are each formed as a flat nozzle

(15) and the hot-air nozzle (13) and the cold-air nozzle (14) have respective flat sides on each other.

26.(previously presented) The air nozzle attachment as defined in claim 24, wherein the hot-air nozzle (13) and the cold-air nozzle (14) have at least approximately equal blower cross sections (16, 17).

27.(previously presented) The air nozzle attachment as defined in claim 24, wherein the hot-air nozzle (13) has a smaller blower cross-section (16) than a blower cross section (17) of the cold-air nozzle (14).

28.(previously presented) The air nozzle attachment as defined in claim 24, wherein the hot-air nozzle (13) and the cold-air nozzle (14) end at the same length.

29.(previously presented) The air nozzle attachment as defined in claim 24, wherein the air nozzle attachment (8) is axially connectable to the hair dryer (2) in the region of the blower opening (7) so as to be rotatable to any angular position.

Claim 30.(canceled)

31.(previously presented) The air nozzle attachment as defined in claim 24, wherein the air nozzle attachment (8) comprises heat-resistant plastic (19).

32.(previously presented) The air nozzle attachment as defined in claim 24, wherein an outer part of the hot-air nozzle (13) and an outer part of the cold-air nozzle (14) have different visual appearances and are visually distinguishable from each other.

33.(previously presented) The air nozzle attachment as defined in claim 32, wherein the outer part (20) of the hot-air nozzle (13) has a red color, and the outer part (21) of the cold-air nozzle (14) has a blue color, whereby the hot-air nozzle (13) and the cold-air nozzle (14) are visually distinguishable from each other.

34.(currently amended) A hair dryer (2) having a fan and a heater for generating a central hot-air stream and a cold-air stream concentric to the central hot-air stream at a blower opening (7), a first air nozzle attachment, and a second air nozzle attachment (23) for optional usage;

wherein said second air nozzle attachment (23) only produces a hot air stream (9), and

wherein said first air nozzle attachment (8) is connectable to the blower opening (7) and produces a hot-air stream (9) and a cold-air stream (10) from said central hot-air stream (5) and said concentric cold-air stream (6), wherein said hot-air stream (9) and said cold-air stream (10) produced by the first air nozzle attachment (8) are arranged side-by-side, wherein the air nozzle attachment (8) comprises a hot-air nozzle (13) and a cold-air nozzle (14) located side-by-side, wherein the first air nozzle attachment (8), on an end connectable with the blower opening (7), is provided with a central conduit entrance (11) and a coaxial conduit entrance (12)

coaxial to the central conduit entrance (11), and wherein the central conduit entrance (11) opens into the hot-air nozzle (13) and the coaxial conduit entrance (12) opens into the cold-air nozzle (14) and wherein the first air nozzle attachment (8) is detachable from the blower opening (7).
